

ABSTRACT

A pull-on disposable wearing article is formed in a crotch region with ~~a pair of first and second pairs of~~ folding guide lines extending from ~~[[a]] first and second waist lateral margins~~ margin toward a transverse middle of the crotch region, respectively ~~and a pair of second folding guide lines extending from a second waist lateral margin toward the transverse middle of the crotch region~~. The crotch region is divided into a first zone enclosed by the first waist lateral margin and the first folding guide lines, a second zone enclosed by the second waist lateral margin and the second folding guide lines and a third zone outside the ~~except these~~ first and second zones. Inside the side edges of the core, first and second elastic members ~~stretched at a predetermined ratio~~ are contractibly attached to the article. ~~[[These]]~~ The first and second elastic members extend ~~in the leg surrounding direction~~ across ~~[[these]]~~ the first and second zones to the third zone. ~~[[These]]~~ The first and second zones are pulled inward ~~as viewed in a leg surrounding direction~~ under ~~[[a]]~~ contractile ~~[[force]]~~ forces of the elastic members to form tucks which are convex inwardly of the leg-holes.
